

## Greenology at work.

At **TERRA renewal**, we offer decades of expertise in agronomy, soil science, engineering, geology and regulatory issues. We are environmental leaders and one of the largest recyclers of organic liquid waste.

**TERRA**  
renewal

# Environmental Focus

Founded in 1995, Terra Renewal offers a wide range of green recycling approaches, including land application of organic liquid waste as nutrient-rich fertilizer on farmland. We safely and cleanly collect, transport and recycle all material; and we handle regulatory permitting and compliance, material and soil sampling, and field mapping.

We serve some of the most respected food processors, restaurants, oil/gas exploration and production companies and municipalities with recycling approaches for the disposal of:

- ▲ Wastewater residuals (DAF skimmings, scrap food waste, biosolids)
- ▲ Used cooking oil (yellow and brown grease)
- ▲ Grease-trap waste
- ▲ Lagoon and digester contents
- ▲ Drilling mud and cuttings, flowback and KCL water

Our environmental team can also develop nutrient management plans, and acquire and interpret trends and legislation about “working green.” We are proud of our relationships with customers, regulators, landowners and the communities where we work.

Our **comprehensive environmental services** include:

- ▲ Investigating, sampling and evaluating organic waste material
- ▲ Developing residuals management plans
- ▲ Field mapping
- ▲ Permitting of land application sites
- ▲ Soil sampling pre and post application
- ▲ Compliance monitoring, management and reporting
- ▲ Regulatory liaison
- ▲ Communicating with community/local governments

We work with our customers in association with farmers/landowners and regulatory agencies to develop sound recycling solutions that are good for our communities and our world.
